

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1-42 (Canceled)

43. (New) A method for specifying and automating file handling in a portable image capture device, the portable image capture device including at least one stored file and configured to communicate with a computer, the method comprising:

in response to a user configuring an action list on the computer by mapping one or more user input events on the portable image capture device to one or more file handling actions on the at least one stored file, downloading the action list from the computer to the portable image capture device; and

performing the corresponding file handling action on the at least one stored file within the portable image capture device when an input event on the portable image capture device is detected that matches one of the user input events in the action list.

44. (New) The method of claim 43 further comprising:

downloading an executable file associated with the corresponding file handling action to the portable image capture device; and

executing the executable file in the device in order to perform the file handling action.

45. (New) The method of claim 44 wherein downloading the executable file associated with the file handling action to be performed comprises downloading the executable file corresponding to the file handling action when the action is to be performed.

46. (New) The method of claim 44 further comprising downloading all executable files associated with the file handling actions in the action list at the time the action list is downloaded.
47. (New) The method of claim 43 wherein the at least one stored file comprises a digital image captured by the portable image capture device.
48. (New) The method of claim 43 wherein the computer is used to access a server via a web browser, the method further comprising configuring the action list on the server in response to user input.
49. (New) The method of claim 48 further comprising retrieving the user's account information, including the device type and an operating environment of the device in response to the user logging into the server.
50. (New) The method of claim 49 further comprising displaying to the user a list of supported user interface input events specific to the user's type of device for the user to select a desired set of input events.
51. (New) The method of claim 50 further comprising displaying a set of actions that can be performed when each selected event occurs for the user to map one or more actions to each event.
52. (New) The method of claim 51 wherein the set of actions may include any combination of e-mailing the file as an attachment, posting the file to a photo sharing service, posting the file to a specified web site, resizing if the file is an image, and saving the file to a folder.
53. (New) The method of 51 further comprising storing the mappings as a downloadable action list.

54. (New) The method of claim 43 further including requesting the action list from the computer by the device.
55. (New) The method of claim 54 further comprising:
transmitting identity information from the device to the server for the server to use to retrieve the action list configured by the user; and
downloading the action list to the device.
56. (New) The method of claim 55 wherein performing the corresponding file handling action includes downloading an executable file that is compatible with the device's operating environment.
57. (New) The method of claim 56 wherein the device sends operating environment information to the server in the request in order for the server to find the action executable file appropriate for the device's operating environment.
58. (New) The method of claim 43 further comprising retrieving an executable file necessary to perform the corresponding file handling action.
59. (New) The method of claim 58 further comprising:
determining if the executable file is present in memory of the portable image capture device; and
if the executable file is present in the memory, retrieving and executing the executable file from the memory, thereby performing the action.
60. (New) The method of claim 59 further comprising:
if the executable is not present in the memory of the portable image capture device:
retrieving the executable file from the computer; and
executing the executable file.

61. (New) A computer-readable medium containing executable instructions for specifying and automating file handling in a portable image capture device, the device including at least one stored file and configured to communicate with a computer, the instructions, when executed:

downloading an action list from the computer to the device, the action list comprising a mapping of one or more user input events on the portable image capture device to one or more file handling actions on the at least one stored file; and

performing a corresponding file handling action on the file within the device when an input event on the device is detected that matches one of the events in the downloaded action list.

62 (New) The computer-readable medium of claim 61 further comprising providing an interface that allows a user to configure the action list.

63. (New) The computer-readable medium of claim 61 further including instructions for downloading an executable file associated with the file handling action to be performed and executing the executable file in the device in order to perform the action.

64. (New) The computer-readable medium of claim 63 further comprising instructions for downloading the executable file corresponding to the file handling action when the action is to be performed.

65. (New) The computer-readable medium of claim 63 further including instructions for downloading all the executable files associated with the actions in the action list at the time the action list is downloaded.

66. (New) The computer-readable medium of claim 61 wherein the at least one stored file comprises a digital image captured by the portable image capture device.

67. (New) The computer-readable medium of claim 61 wherein the computer is used to access a server via a web browser, the computer-readable medium having further instructions for configuring the action list on the server in response to user input.

68. (New) The computer-readable medium of claim 67 further comprising instructions for retrieving the user's account information, including the device type and an operating environment of the device in response to the user logging into the server.

69. (New) The computer-readable medium of claim 67 having further instructions for displaying to the user a list of supported user interface input events specific to the user's type of device for the user to select a desired set of input events.

70. (New) The computer-readable medium of claim 69 having further instructions for:
displaying a set of available actions that can be performed when each selected event occurs; and
providing an interface for the user to map one or more actions to each event.

71. (New) The computer-readable medium of claim 70 wherein the set of available actions may include any combination of e-mailing the file as an attachment, posting the file to a photo sharing service, posting the file to a specified web site, resizing if the file is an image, and saving the file to a folder.

72. (New) The computer-readable medium of claim 70 having further instructions for storing the mappings as a downloadable action list.

73. (New) The computer-readable medium of claim 67 having further instructions for requesting the action list from the computer.

74. (New) The computer-readable medium of claim 73 having further instructions for transmitting identity information from the device to the server for the server to use to retrieve the action list configured by the user and downloading the action list to the device.

75. (New) The computer-readable medium of claim 67 having further instructions for downloading an executable file that is compatible with the device's operating environment.

76. (New) The computer-readable medium of claim 61 having further instructions for:
detecting the input events on the device;
comparing the detected input events to the events listed in the downloaded action list; and
if a match occurs, performing the corresponding action or actions in the list by retrieving
the executable file necessary to execute that action.
77. (New) The computer-readable medium of claim 76 having further instructions for:
determining if the executable file is present in memory of the portable image capture
device; and
if the executable file is present in the memory, retrieving and executing the executable
file, thereby performing the action.
78. (New) The computer-readable medium of claim 77 having further instructions for:
if the executable is not present in the memory:
requesting the executable file from the computer; and
executing the executable file once received.
